

LoadMaster Compact

Automatic Loading of Workpieces

Skilful Loading

The highest standard of mechanical engineering quality, over 30 years of experience in factory automation, global presence. It is fair to say, that the handling facilities of the LoadMaster series manage their loading tasks perfectly. And this in addition to remarkable investment and ROI factors.

Up to 5'000 kg transfer weight. Thanks to the ingenious kinetic system with very limited space requirement. With the 360° swivel function, any position in the magazine and on the machine tables can be reliably reached.

The magazines are of vertical design; the storage positions are arranged over two, three or four levels, saving on space and cost. Each level is optimally configured for typical workpiece sizes.

Walk-in or accessible via sliding doors. The setup stations are integral components of the LoadMaster production lines. Versions are available with lifting unit, with rotating and tilting table, or with indexing table. The setup positions are accessible via overhead crane.

The process control system assists the operator in the daily production flow, with clear displays of system status.

FACTS

- From 500 to 5'000 kg transfer weight
- Up to 4 levels in the magazines
- Ergonomic setup stations
- User-friendly process control system

Skilful Transport

The transfer unit moves between the magazines and machines on solid rails. The grippers optimally support the various application scenarios. Double grippers for fast chip-to-chip times or MultiFork for automatic loading of different pallet sizes.

In systems with different pallet sizes (a specialty in this weight class), the “MultiFork” gripper is the alternative to changing individual grippers. The gripper width smoothly adapts to different pallet dimensions.

Solid technology for large workpieces. Adapted design for weights that are moved most frequently.

360° freedom of turning range. Along with the swiveling axis of the gripper arm, this results in efficient loading and unloading of the machine table and storage position.

The "TwinFork" double gripper significantly reduces chip-to-chip time when changing pallets. This is an important factor for long transfer distances and short machining times.

FACTS

- 360° freedom of the tower axle
- Adapted gripper system
- Fast chip-to-chip time
- Accessibility to machine tables

Skilful Storage

We refer to them as pallet storage units, magazines, or storage locations. The name is the program and the program is very flexible. Both the level height and arrangement by level can be adapted to the workpiece sizes used. And since there is often still more space vertically, we also build up to four levels high – this is optimal use of space!

Mixed pallet sizes in a production line allow optimal use of the available space. A magazine module consists of a rack with up to 4 levels. The transfer unit's rail is integrated.

The magazine modules can be combined in series. There are no limits on the number of units to be connected. The total rail length depends on the number of machines and their positioning.

Modules are available with or without pallet storage unit. A drip pan for returning coolant is located under each pallet position. Safety devices that comply with applicable guidelines protect the entire system.

FACTS

- Modules can be combined in series
- Drip pans per magazine position
- Integrated safety device
- Monitored access door

EROWA - Manufacturing automation at its best

EROWA AG, founded in Switzerland in 1971, is now a globally operating organization specializing in the development, production, consulting, and distribution of state-of-the-art manufacturing technology for tool and mold making, as well as for production and precision engineering. With their headquarters located in central Switzerland, EROWA ranks among the world's leading companies in clamping technology and automation. Having 13 subsidiaries and 22 representatives, EROWA offers international points of contact and worldwide customer service.

Empowering Your Production

The next step towards greater efficiency, precision and productivity starts now. With EROWA, you have a partner who will optimize your production holistically - from clamping technology to automation and process control. Our innovative solutions adapt flexibly to your requirements and grow with you - for production that is ready for tomorrow.

Get in touch with us - we will be happy to assist you.
